In the United Kingdom 299,449 *births* and 238,576 *deaths* were registered in the three months ending 31st March 1900. The natural increase of population was, therefore, 60,873. The number of persons married in the quarter ending 31st December 1899 was 174,214.

The birth-rate in the United Kingdom in the *first* quarter of 1900 was 29·7, and the death-rate 23·6, per 1000. The marriage-rate in the *fourth* quarter of 1899 was 17·0 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

#### *Emigration.*

According to the returns issued by the Board of Trade, it appears that 42,237 emigrants embarked during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 869 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 23,736, of whom 15,819 were English, 2611 Scotch, and 5306 Irish, whilst 18,501 others were of foreign nationality. Compared with the

averages in the three preceding first quarters, the proportion of English emigrants showed a decrease of 10·4 per cent., that of Scotch emigrants a decrease of 4·0 per cent., and that of Irish emigrants an increase of 39·2 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 72–81.

The weather during the first two months of the quarter was generally wet and dull, the temperature being above the average, excepting from 12th to 14th January, and from 27th January to 15th February. The coldest period was from 7th to 13th February, when the deficiency of temperature averaged  $9^{\circ}3$ . The weather in March was cold, fine, and dry, the temperature being below the average, excepting from 10th to 15th of the month. In the first quarter of 1899, January had been the warmest and March the coldest month; last quarter January was again the warmest month, but February was slightly colder than March.

The mean reading of the barometer at Greenwich was 29·661 inches, being ·115 of an inch below the average reading in the first quarters of 59 years; the mean reading was ·325 of an inch below the average in January, and ·408 below in February, but was ·089 above the average in March. The mean temperature of the air was  $39^{\circ}2$ , which is  $0^{\circ}2$  above the average in the first quarters of 129 years. The mean temperature was  $3^{\circ}7$  above the average in January, but was  $0^{\circ}6$  below the average in February, and  $2^{\circ}4$  below the average in March. At 26 other stations of observation, the mean temperature of the air during the quarter ranged from  $35^{\circ}8$  at Wolverhampton,  $36^{\circ}0$  and  $36^{\circ}2$  at two stations in Halifax, and  $37^{\circ}1$  at Nottingham and at Stonyhurst, to  $40^{\circ}6$  at Eastbourne and at Llandudno,  $41^{\circ}0$  at Ventnor,  $41^{\circ}2$  at Barnstaple,  $42^{\circ}3$  at Truro, and  $44^{\circ}2$  in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory was 6·78 inches, which is 1·85 inch above the average in the first quarters of 85 years. The amount was 0·44 inch above the average in January and 2·04 inches above in February, but was 0·63 inch below the average in March. At 26 other stations of observation, the rainfall during the quarter ranged from 6·66 inches at Cambridge, 6·71 inches at Lowestoft, 6·78 inches at Hull, and 6·84 inches at Carlisle, to 11·95 inches at Ventnor, 12·61 inches at Llangammarch Wells, 12·94 inches in Guernsey, and 16·58 inches at Truro.

The duration of bright sunshine recorded at the Royal Observatory was 172·8 hours, being 19·1 per cent. of the time during which the sun was above the horizon, and was equal to the mean proportion in the twenty-two preceding first quarters. The duration of bright sunshine was above the average during January and February, the excess amounting to 10·8 hours and 5·7 hours respectively; but it was 16·4 hours below the average in March.

### *Deaths.*

The deaths registered in England and Wales last quarter numbered 181,313, and were in the proportion of 22·9 annually per 1000 persons living, the average rate in the ten preceding first quarters having been 20·8. Compared with the averages in the ten preceding first quarters the death-rate both of males and of females showed an increase of 2·1 per 1000 living. **VIOLENT DEATHS.**—The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 5540 last quarter, and corresponded to an annual rate of 0.70 per 1000 of the population, which is 0.06 above the average rate in the ten preceding first quarters. The rates in the several counties last quarter ranged from 0.19 in Rutlandshire, 0.25 in Hertfordshire, 0.34 in Huntingdonshire, and 0.37 in Middlesex and in Wiltshire, to 0.79 in the North Riding of Yorkshire and in South Wales, 0.81 in Warwickshire, 0.84 in Staffordshire, 0.87 in Cumberland, 0.92 in London, and 1.00 in Northumberland. In the thirty-three great towns the mean rate was 0.84 per 1000 living, the rates in the several towns ranging from 0.24 in Norwich, 0.27 in Plymouth, 0.34 in Burnley, and 0.37 in Gateshead, to 0.96 in Birmingham, 1.04 in Nottingham, 1.05 in Manchester, 1.19 in Liverpool, and 1.35 in Newcastle on Tyne.

**CERTIFICATION OF CAUSES OF DEATH.**—Of the 181,313 deaths registered in England and Wales last quarter, the causes of 167,034, or 92.1 per cent., were certified by registered medical practitioners, and the causes of 10,637, or 5.9 per cent., by coroners after inquest; whilst the causes of the remaining 3642, or 2.0 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding first quarters having been 2.6 per cent. The proportions per cent. ranged from 0.6 in London, 0.7 in Monmouthshire, 0.9 in Somersetshire, 1.0 in Surrey, and 1.1 in Sussex and in Middlesex, to 3.4 in Dorsetshire, 3.6 in North Wales, 4.0 in Bedfordshire, 5.2 in Huntingdonshire, and 6.3 in Herefordshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1.4 per cent.; but while no uncertified deaths were registered in Croydon, in Plymouth, or in Nottingham, the proportion rose to 3.0 in Huddersfield, 3.5 in Sheffield, 3.7 in Preston, 3.9 in Halifax, and 4.6 in Liverpool.

**INQUESTS.**—Inquests were held in England and Wales concerning 10,637, or 5.9 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having also been 5.9 per cent. In the thirty-three great towns the proportion of inquest cases was 7.8 per cent., ranging from 2.2 in Gateshead, 2.4 in Preston, 3.1 in Burnley, 3.7 in Halifax, and 4.1 in Blackburn, to 8.8 in Bristol and in Cardiff, 9.0 in Nottingham, 9.4 in Leeds, 9.6 in London, and 10.0 in Newcastle on Tyne.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 26,494, or 14·6 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 12·8 per cent. In the thirty-three great towns the deaths in public institutions averaged 22·4 per cent. of the total deaths, the percentages in the several towns ranging from 7·4 in Gateshead, 9·2 in Swansea, 10·0 in Plymouth and in Blackburn, to 21·6 in Birmingham, 21·7 in Brighton, 24·2 in Manchester, 25·5 in Liverpool, and 30·4 in London.

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex County Lunatic Asylums at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 23·2 annually per 1000 from all causes, and to 1·82 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 22·7 and 1·79 per 1000 respectively. Table VIII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

**EDINBURGH, GLASGOW, AND DUBLIN.**—The annual death-rate per 1000 living last quarter was 23·8 in Edinburgh, 27·5 in Glasgow, and 39·6 in Dublin, against 23·2 in London.

**COLONIAL AND FOREIGN CITIES.**—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-eight of the Colonial and Foreign cities, with an aggregate population estimated at about twenty-two millions, corresponded to an annual rate of 29·1 per 1000 persons living, against a rate of 23·6 in the thirty-three great English towns.

In twenty-three European and American cities the mean rate was 22·8 per 1000, against 23·6 in the thirty-three great English towns. In Paris the rate was 23·9, in Berlin 19·4, in Vienna 21·9, and in New York 21·7, against 23·2 in London. Among the other cities the death-rates ranged from 17·8 in Dresden, 18·6 in Christiania, 18·8 in Stockholm, and 18·9 in Brussels, to 27·9 in Moscow, 28·3 in Munich, 29·8 in St. Petersburg, and 35·4 in Trieste. Among the Indian and African cities, the rate rose to 54·0 in Calcutta and 154·7 in Bombay.

*Small-pox* caused 2,550 deaths (equivalent to an annual rate of 12·4 per 1000) in Bombay, 108 in Calcutta, 57 in St. Petersburg, 42 in Cairo, and 20 in Moscow. In proportion to population, *measles* was most fatal in Bombay, Madras, St. Petersburg, Munich, Rome, and Cairo; *scarlet fever* in St. Petersburg, Moscow, Berlin, Buda Pesth, and New York; *diphtheria* in Stockholm, St. Petersburg, Moscow, Venice, New York, and Philadelphia;

*whooping-cough* in Christiania, Berlin, Prague, and Trieste ; "*fever*" in the Indian and African cities, and in Paris, St. Petersburg, and Philadelphia ; and *diarrhæal diseases* in the Indian and African cities, and in St. Petersburg, Moscow, and Munich. *Plague* was prevalent in Bombay and Calcutta, the rates from this cause alone being 37.1 per 1000, and 18.4 per 1000 in these two cities respectively.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

<sup>a</sup> See page 2, note <sup>b</sup>.

<sup>b</sup> For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in the Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 31st March 1900.

\* 312: 1, 4.—The boundaries of these sub-districts were altered on 1st January 1900; see page 70.

† 318: 319: 320: 321.—On 1st January 1899, portions of Keynsam, Long Ashton (formerly Bedminster), and Barton Regis districts were transferred to Bristol district. The area added to Bristol was divided into seven sub-districts, the area remaining in the reduced districts of Long Ashton and Barton Regis was re-arranged in sub-districts as shown above. In consequence of the above changes the averages for these four districts cannot be given separately; the average for the four districts taken together is 1831.

In the United Kingdom 295,913 *births* and 183,201 *deaths* were registered in the three months ending 30th June 1900. The natural increase of population was, therefore, 112,712. The number of persons married in the quarter ending 31st March 1900 was 115,086.

The birth-rate in the United Kingdom in the *second* quarter of 1900 was 29·0, and the death-rate 18·0, per 1000. The marriage-rate in the *first* quarter of 1900 was 11·4 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

*Emigration.*

According to the returns issued by the Board of Trade, it appears that 90,150 emigrants embarked during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 708 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 50,696, of whom 24,063 were English, 5126 Scotch, and 21,507 Irish, whilst 39,454 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 750; Scotland, 1188; and Ireland, 4763. Compared with the

averages in the three preceding second quarters, the proportion of English emigrants showed an increase of 9·5 per cent., that of Scotch emigrants an increase of 34·1 per cent., and that of Irish emigrants an increase of 29·9 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 75-82.

Speaking generally, the weather was fine with little rain during April and May, but dull and wet during June. The mean temperature of the air was generally above its average from 10th to 24th April, from 30th April to 8th May, and from 9th to 19th June, but below its average during the other parts of the quarter.

The mean reading of the barometer at Greenwich was 29.793 inches, being .009 of an inch above the average reading in the second quarters of 59 years; the mean reading was .062 of an inch above the average in April, and .017 of an inch above in May, but was .053 of an inch below the average in June. The mean temperature of the air was  $52^{\circ}8$ , which is  $0^{\circ}4$  above the average in the second quarters of 129 years. The mean temperature was  $1^{\circ}2$  above the average in April,  $1^{\circ}0$  below the average in May, and  $1^{\circ}1$  above the average in June. At 27 other stations of observation, the mean temperature of the air during the quarter ranged from  $48^{\circ}8$  and  $49^{\circ}2$  at two stations in Halifax,  $49^{\circ}1$  at Wolverhampton, and  $49^{\circ}2$  at Llangammarch Wells, to  $52^{\circ}6$  at Portsmouth,  $52^{\circ}7$  at Oxford and at Cambridge, and  $53^{\circ}9$  at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 5.11 inches, which is 0.50 inch below the average in the second quarters of 85 years. The amount was 0.77 inch below the average in April and 0.62 inch below in May, but exceeded the average by 0.89 inch in June. At 27 other stations of observation, the rainfall during the quarter ranged from 4.04 inches at Portsmouth, 4.09 inches at Cambridge, and 4.17 inches at Camden Square, to 8.10 inches at Stonyhurst, 9.99 inches at Llangammarch Wells, and 10.96 inches at Carlisle.

The duration of bright sunshine recorded at the Royal Observatory was 507.7 hours, being 36.5 per cent. of the time during which the sun was above the horizon; the mean proportion in the twenty-three preceding second quarters having been 34.8 per cent. The duration of bright sunshine was above the average during April and June, the excess amounting to 25.4 hours and 14.8 hours respectively; but it was 16.3 hours below the average in May.

### *Deaths.*

The deaths registered in England and Wales last quarter numbered 141,513, and were in the proportion of 17.7 annually per 1000 persons living, the average rate in the ten preceding second quarters having been 17.6. In

Compared with the averages in the ten preceding second quarters the death-rate of males showed an increase of 0·4, and that of females a decrease of 0·2, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 120 is to 100, against a proportion of 116 to 100 in the second quarters of the ten preceding years.

No uncertified deaths were registered in Rutlandshire, and among other counties the proportions per cent. ranged from 0·6 in London and in Middlesex, and 0·8 in Buckinghamshire, in Wiltshire, in Cheshire, and in Monmouthshire, to 2·9 in Herefordshire, 3·2 in Derbyshire and in North Wales, 4·4 in Westmorland, and 4·5 in Huntingdonshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·3 per cent.; but while no uncertified deaths were registered in Croydon, in Derby, or in Oldham, the proportion rose to 3·3 in Huddersfield, 3·4 in Halifax, 3·6 in Preston, and 4·1 in Liverpool.

**INQUESTS.**—Inquests were held in England and Wales concerning 8,954, or 6·3 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 6·0 per cent. In the thirty-three great towns the proportion of inquest cases was 7·7 per cent., ranging from 3·1 in Preston and in Huddersfield, 3·2 in Halifax and in Gateshead, and 3·4 in Blackburn, to 9·5 in Brighton and in Newcastle on Tyne, 9·8 in Swansea, and 9·9 in London and in Croydon.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 21,178, or 15·0 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 13·2 per cent. In the thirty-three great towns the deaths in public institutions averaged 22·9 per cent. of the total deaths, the percentages in the several towns ranging from 9·5 in Gateshead, 9·9 in Bolton, 10·2 in Blackburn, 10·3 in Plymouth, and 10·6 in Preston, to 22·2 in Croydon, 22·4 in Manchester, 22·8 in Brighton, 26·9 in Liverpool, and 31·4 in London.

---

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex

County Lunatic Asylums at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 17·6 annually per 1000 from all causes, and to 1·79 per 1000 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 17·1 and 1·76 per 1000 respectively. Table IX. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 19·1 in Edinburgh, 21·0 in Glasgow, and 25·2 in Dublin, against 17·6 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-eight of the Colonial and Foreign cities, with an aggregate population estimated at about twenty-two millions, corresponded to an annual rate of 25·8 per 1000 persons living, against a rate of 18·7 in the thirty-three great English towns.

In twenty-three European and American cities the mean rate was 21·4 per 1000, against 18·7 in the thirty-three great English towns. In Paris the rate was 20·7, in Berlin 18·2, in Vienna 22·9, and in New York 19·9, against 17·6 in London. Among the other cities the death-rates ranged from 15·0 in Amsterdam, 15·6 in the Hague, and 16·1 in Brussels, to 27·2 in St. Petersburg, 27·5 in Trieste, 27·8 in Prague, and 33·4 in Moscow. Among the Indian and African cities, the rate rose to 45·6 in Cairo, 55·2 in Calcutta, and 95·1 in Bombay.

*Small-pox* caused 410 deaths in Bombay, 349 in Calcutta (during 12 weeks), 89 in St. Petersburg, 74 in Cairo (during 9 weeks), 36 in Moscow, and 22 in Alexandria (during 9 weeks). In proportion to population *measles* was most fatal in Bombay, Moscow, Munich, and Cairo; *scarlet fever* in St. Petersburg, Moscow, and Berlin; *diphtheria* in Stockholm, St. Petersburg, Moscow, New York, and Philadelphia; *whooping-cough* in Christiania; "*fever*" in the Indian and African cities, in St. Petersburg, and in Philadelphia; and *diarrhœal diseases* in the Indian and African cities, and in St. Petersburg, Moscow, Breslau, and Munich.

<sup>a</sup> The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

<sup>b</sup> See page 2, note <sup>b</sup>.

<sup>c</sup> For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in the Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 30th June 1900.

In the United Kingdom 290,462 *births* and 166,510 *deaths* were registered in the three months ending 30th September 1900. The natural increase of population was, therefore, 123,952. The number of persons married in the quarter ending 30th June 1900 was 169,202.

The birth-rate in the United Kingdom in the *third* quarter of 1900 was 28·2, and the death-rate 16·1, per 1000. The marriage-rate in the *second* quarter of 1900 was 16·6 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

#### *Emigration.*

According to the returns issued by the Board of Trade, it appears that 105,402 emigrants embarked during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1527 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 59,940, of whom 38,056 were English, 9060 Scotch, and 12,824 Irish, whilst 45,462 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 1186; Scotland, 2100; and Ireland, 2840. Compared with the

averages in the three preceding third quarters, the proportion of English emigrants showed an increase of 12·5 per cent., that of Scotch emigrants an increase of 39·8 per cent., and that of Irish emigrants an increase of 10·7 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 71–79.

The weather was for the most part fine, bright, and warm in July and in September, but dull and wet in August. The mean daily temperature of the air was generally below its average from 1st to 8th July, but above it during the remainder of the month, with a remarkably hot period extending from 10th to 27th; the temperature fell below the average from 1st to 11th August, rose above it from 12th to 21st, and again fell below it from 22nd August until 6th September, after which it was above the average until the end of the quarter, except during a short period from 11th to 13th September.

The mean reading of the barometer at Greenwich was 29.861 inches, being .066 of an inch above the average reading in the third quarters of 59 years; the mean reading was above the average in each month of the quarter, the excess being .042 of an inch in July, .005 of an inch in August, and .151 of an inch in September. The mean temperature of the air was  $61^{\circ}8$ , which is  $2^{\circ}0$  above the average in the third quarters of 129 years. The mean temperature was  $5^{\circ}1$  above the average in July,  $0^{\circ}4$  below the average in August, and  $1^{\circ}3$  above the average in September. At 24 other stations of observation, the mean temperature of the air during the quarter ranged from  $56^{\circ}8$  at Llangammarch Wells and at Halifax,  $57^{\circ}4$  at Stonyhurst, and  $57^{\circ}5$  at Wolverhampton, to  $61^{\circ}4$  at Ventnor and at Oxford,  $61^{\circ}6$  in Guernsey,  $61^{\circ}8$  at Cambridge, and  $62^{\circ}7$  at Camden Square.

The amount of rain measured during the quarter at the Royal Observatory was 4.58 inches, which is 2.61 inches below the average in the third quarters of 85 years. The amount was below the average in each month of the quarter, the deficiency being 1.12 inch in July, 0.31 inch in August, and 1.18 inch in September. At 24 other stations of observation, the rainfall during the quarter ranged from 3.61 inches at Cambridge, 3.74 inches at Ventnor, and 3.91 inches at Barnet, to 10.02 inches at Llangammarch Wells, 10.18 inches and 10.55 inches at two stations in Halifax, and 13.30 inches at Stonyhurst.

The duration of bright sunshine recorded at the Royal Observatory was 635.7 hours, being 48.1 per cent. of the time during which the sun was above the horizon; the mean proportion in the twenty-three preceding third quarters having been 34.4 per cent. The duration of bright sunshine was

above the average during each month of the quarter, the excess amounting to 123·5 hours in July, 18·7 hours in August, and 38·1 hours in September.

### *Deaths.*

The deaths registered in England and Wales last quarter numbered 133,090, and were in the proportion of 16·5 annually per 1000 persons living, the average rate in the ten preceding third quarters having been 17·1. In registration counties the death-rates ranged from 8·4 in Rutlandshire, 11·2 in Dorsetshire and in Westmorland, 11·3 in Oxfordshire, and 11·6 in Wiltshire, to 19·1 in Staffordshire and in Northumberland, 19·4 in Lancashire and in the East Riding of Yorkshire, and 19·5 in Warwickshire.

The 133,090 registered deaths included 69,581 of males and 63,509 of females, the death-rate among males being 17·8, and that among females 15·2, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding third quarters the death-rate of males showed a decrease of 0·5, and that of females a decrease of 0·7, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 117 is to 100, against a proportion of 115 to 100 in the third quarters of the ten preceding years.

**URBAN AND RURAL MORTALITY.**—In those parts of England and Wales that are mainly urban\* in character, with a population estimated at a little more than twenty-two millions in the middle of 1900, the death-rate last quarter was 17·7 per 1000 living; whilst in the remaining and chiefly rural areas, with a population of about ten millions, the rate was 13·7 per 1000. The urban and rural rates were in each case 0·7 per 1000 below the average in the ten preceding third quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 129 is to 100, the mean proportion in the ten preceding third quarters having been 128 to 100.

In the thirty-three great towns, of which the aggregate population in the middle of 1900 is estimated at a little more than eleven and a half millions, the death-rate was 18·6 per 1000 living, or 2·1 in excess of the death-rate in the whole country. The rates in the several towns ranged from 12·6 in Bradford and in Cardiff, 13·2 in Halifax, and 13·3 in Croydon, to 22·3 in Manchester, 23·3 in Preston, 23·9 in Salford, 24·5 in Liverpool, and 24·7 in Sheffield.

In the sixty-seven other large towns, with an aggregate population estimated at more than four millions in the middle of 1900, the death-rate was 16·8 per 1000 living, or 1·8 per 1000 below the rate in the great towns; whilst in the remainder of England and Wales, excluding these 100 towns, it was 14·9.

**MORTALITY AT DIFFERENT AGES.**—Of the 133,090 deaths registered last quarter, 43,673 were those of infants under one year of age, 57,646 those of persons aged between one year and sixty years, and 31,771 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 188 per 1000, which is equal to the average in the ten preceding third quarters. In registration counties the lowest proportions per 1000 births were 60 in Rutlandshire, 70 in Wiltshire, in Dorsetshire, and in Westmorland, and 85 in Shropshire; the highest proportions were 221 in London and in Middlesex, 225 in Lancashire, 232 in Essex, 240 in Warwickshire, and 259 in the East Riding of Yorkshire.

In the thirty-three great towns as a whole, infant mortality was equal to 231 per 1000 births, being higher than the proportion in England and

Wales by 43 per 1000. Among the several towns the lowest proportions were 83 in Halifax, 123 in Bradford, 146 in Bristol, and 152 in Huddersfield: the highest were 274 in Leicester, 284 in Plymouth, 292 in West Ham, 320 in Sheffield, and 361 in Preston. Among the sixty-seven other large towns infant mortality averaged 209 per 1000 births, ranging from 87 in Bath and in Worcester, 95 in Burton upon Trent, 110 in Hornsey, and 113 in Cheltenham, to 300 in St. Helens and in Wigan, 316 in Grimsby, 332 in Bootle, 362 in Longton, and 369 in York. Excluding these 100 towns, infant mortality in the remainder of England and Wales was in the proportion of 151 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7.9 per 1000 of the estimated population at this group of ages, being 0.4 below the mean rate in the ten preceding third quarters. In the thirty-three great towns the mean rate of mortality at this age-group was 9.1 per 1000 living, and ranged from 6.1 in Croydon, 6.4 in Cardiff and in Burnley, and 6.7 in Bradford, to 11.2 in Sheffield, 11.4 in Sunderland, 11.6 in Manchester, 12.4 in Salford, and 12.6 in Liverpool. In the sixty-seven other large towns the rate averaged 8.0 per 1000, and in the remainder of England and Wales, exclusive of these 100 towns, it was 7.1 per 1000.

Among persons aged sixty years and upwards the mortality in England and Wales was at the annual rate of 53.1 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding third quarters having been 53.9. In the thirty-three great towns the rate was 57.7 per 1000, and ranged from 43.4 in Norwich, 45.4 in Leicester, 45.6 in West Ham, and 48.0 in Croydon, to 70.7 in Sunderland, 71.3 in Sheffield, 71.9 in Huddersfield, 78.4 in Bolton, and 81.2 in Salford. In the sixty-seven other large towns the rate at this age-group averaged 55.2 per 1000, and in the remainder of the country, exclusive of these 100 towns, it was 50.5 per 1000.

Compared with the mean rates in the ten preceding third quarters the mortality of persons between one year and sixty years of age showed a decrease of 4.8 per cent., and that of persons aged sixty years and upwards a decrease of 1.5 per cent.

ZYMOTIC DISEASES.—The 133,090 deaths from all causes, registered last quarter, include—

15,573	that were attributed to	diarrhœa
2,619	"	" whooping-cough,
2,503	"	" measles,
1,883	"	" diphtheria,
1,409	"	" "fever,"
739	"	" scarlet fever,
and 13	"	" small-pox.

Thus, to the above-mentioned zymotic diseases in the aggregate, 24,739 deaths were referred, being in the proportion of 3.05 annually per 1000 of the population, which is 0.11 below the mean proportion in the third quarters of the ten preceding years. In proportion to population, the mortality from diphtheria and from whooping-cough, was slightly above, whilst that from small-pox, scarlet fever, "fever," and diarrhœa was in each case below the decennial average. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 4.18 per 1000 of the population, and in the sixty-seven other large towns, to a rate of 3.51 per 1000. In the remainder of England and Wales, outside the 100 chief towns, the rate was 2.17 per 1000.

*Diarrhœa* caused 15,573 deaths during the quarter, corresponding to an annual rate of 1.93 per 1000 of the population, which differs but little from the decennial average rate. The highest county death-rates from diarrhœal were 3.21 per 1000 in Essex, 3.39 in Warwickshire, and 4.55 in the East Riding of Yorkshire. In the thirty-three great towns the

diarrhoea death-rate averaged 2·89 per 1000, the highest rates being 5·03 in Preston, 5·17 in Sheffield, and 5·73 in Hull. In the sixty-seven other large towns the rate averaged 2·24 per 1000, and among them diarrhoea was most fatal in Walthamstow, Rotherham, Wigan, St. Helens, Aston Manor, Grimsby, and York. In the rest of England and Wales the diarrhoea death-rate averaged 1·18 per 1000. Among registration districts and sub-districts outside the 100 chief towns diarrhoea was especially fatal in Northfleet, Harpenden, East Ham, Nuneaton, Pleasley, Ilkeston, Culcheth, Leigh (Lanc.), Rawmarsh, Barmbrough, and Doncaster. In accordance with precedent, special Tables relating to the summer mortality from diarrhoea have been inserted in this Return (*see* Tables IX, X, XI).

*Whooping-cough* was the registered cause of death in 2619 instances, corresponding to a death-rate of 0·32 per 1000 of the population, which is somewhat higher than the average rate from this disease in the corresponding or third quarters of the preceding ten years. No deaths from this disease were registered in Wiltshire or in Rutlandshire, and the death-rate did not exceed 0·05 per 1000 in Somersetshire, whilst it rose to 0·56 in Nottinghamshire, 0·57 in Essex, and 0·67 in Huntingdonshire. In the thirty-three great towns the rate averaged 0·42 per 1000. No deaths from this disease were reported in Bradford, and the lowest recorded rate was 0·04 in Plymouth; the highest rates were 0·78 in West Ham, 0·82 in Derby and in Sheffield, and 0·95 in Gateshead. In the sixty-seven other large towns, whooping-cough mortality averaged 0·30 per 1000; among these towns the disease was especially fatal in St. Helens, Great Yarmouth, Barnsley, Walthamstow, Accrington, and Tottenham. In the remainder of England and Wales the rate was 0·26 per 1000. Among registration districts and sub-districts outside the chief towns whooping-cough showed exceptional fatality in Camelford, Kenilworth, Pleasley, Crowle, Loftus, Trelleck, Pembrey, and Mold.

The deaths from *measles* numbered 2503, and were in the proportion of 0·31 per 1000 of the population, which is identical with the decennial average rate for the third quarter of the year. No deaths from measles were registered in Huntingdonshire or in Rutlandshire; the highest death-rates from this disease were 0·54 in Monmouthshire, 0·60 in Derbyshire, and 1·16 in Staffordshire. In the thirty-three great towns the measles death-rate averaged 0·29 per 1000. No deaths were attributed to this disease either in Portsmouth, in Birkenhead, or in Preston; the highest rates were 1·07 in Brighton, and 1·15 in Derby. In the sixty-seven other large towns the rate averaged 0·47 per 1000, and among these the highest death-rates were recorded in Rhondda, Walsall, Darwen, Hanley, Barrow in Furness, Dudley, and Longton. In the remainder of England and Wales the measles death-rate was equal to 0·29 per 1000. Among registration districts and sub-districts outside the chief towns measles was especially fatal in Chichester, Brixham, Ludlow, Oldbury, Rowley-Regis, Halesowen, Kildwick, and Pontefract.

*Diphtheria* was the registered cause of death in 1883 instances during the quarter, and accounted for a mortality equal to 0·23 per 1000 living, which scarcely differs from the average rate in the ten previous corresponding quarters. The rate of mortality from diphtheria did not exceed 0·03 per 1000 in Cumberland; in the other counties the rate from this disease ranged upwards to 0·49 in Monmouthshire, 0·59 in South Wales, and 1·05 in Leicestershire. In the thirty-three great towns the diphtheria death-rate averaged 0·28 per 1000. No deaths from this disease were registered in Huddersfield or in Gateshead, and the mortality did not exceed 0·02 per 1000 in Hull; in the other great towns the rate ranged upwards to 0·89 in Sheffield, and 1·83 in Leicester. In the sixty-seven other large towns the mortality from diphtheria averaged 0·23 per 1000, and among them showed the greatest excess in Wakefield, Dover, Grimsby, Aberdare, Rhondda, Burton

upon Trent, and Hanley. In the remainder of England and Wales the rate was 0·20 per 1000. Among registration districts and sub-districts outside the chief towns diphtheria was especially fatal in Worthing, St. George (Long Ashton), Burslem, Ecclesfield, Riccall, Mynyddyslwyn, Eglwysilan, and Maesteg.

To "*fever*" 1409 deaths were referred last quarter, giving an annual death-rate of 0·17 per 1000, which is rather below the average in the third quarters of the preceding ten years. No deaths from "*fever*" were registered in Rutlandshire; the highest rates were 0·30 per 1000 in Nottinghamshire, 0·36 in the East Riding of Yorkshire, and 0·47 in Hampshire. In the thirty-three great towns the "*fever*" death-rate averaged 0·19 per 1000. The lowest "*fever*" death-rates were 0·03 in Croydon, and 0·04 in Derby and in Gateshead, whilst the highest were 0·49 in Sunderland, and 1·07 in Portsmouth. In the sixty-seven other large towns the rate averaged 0·18 per 1000, and among these towns fever showed the highest proportional fatality in Exeter, Longton, Jarrow, Wakefield, Merthyr Tydfil, and York. In the remainder of England and Wales the rate was 0·16 per 1000. Among registration districts and sub-districts outside the chief towns the mortality from "*fever*" was excessive in Milton (Kent), Alverstoke, Foleshill, Ilkeston, Ashton in Makerfield, Farnworth, Hemsworth, and Auckland.

To *scarlet fever* 739 deaths were ascribed last quarter, corresponding to an annual mortality of 0·09 per 1000 of the population, or 0·07 below the average rate in the third quarters of the preceding ten years. No deaths from this disease were recorded either in Sussex, in Buckinghamshire, in Oxfordshire, in Huntingdonshire, in Bedfordshire, in Suffolk, in Wiltshire, in Dorsetshire, or in Rutlandshire; the highest rates were 0·14 per 1000 in Staffordshire and in the West Riding of Yorkshire, 0·15 in the East Riding of Yorkshire, and 0·19 in Lancashire. In the thirty-three great towns the scarlet fever death-rate averaged 0·11 per 1000. No deaths from scarlet fever were reported in Croydon, in Brighton, in Plymouth, or in Norwich; the highest rates of mortality from this disease were 0·35 in Sunderland, 0·38 in Salford, and 0·56 in Blackburn. In the sixty-seven other large towns the rate averaged 0·09 per 1000, and among these was excessive in Aberdare, Rhondda, Keighley, Wigan, Wakefield, and Longton. In the remainder of England and Wales the rate was 0·08 per 1000. Among registration districts and sub-districts outside the chief towns scarlet fever showed the highest fatality in Sutton in Ashfield, Hindley, Ashton in Makerfield, Rawtenstall, Bacup, Heaton, and Workington.

*Small-pox* was the registered cause of 13 deaths last quarter, against 117, 33, and 30 in the previous three quarters. Of the 13 fatal cases, 7 belonged to Liverpool.

**VIOLENT DEATHS.**—The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 5029 last quarter, and corresponded to an annual rate of 0·62 per 1000 of the population, which is equal to the average rate in the ten preceding third quarters. The rates in the several counties last quarter ranged from 0·33 in Oxfordshire, 0·34 in Northamptonshire, 0·40 in Cornwall, and 0·42 in Huntingdonshire, to 0·73 in Derbyshire, 0·74 in London, 0·75 in Rutlandshire, 0·82 in Kent, and 0·89 in Northumberland. In the thirty-three great towns the mean rate was 0·65 per 1000 living, the rates in the several towns ranging from 0·23 in Huddersfield, 0·24 in Plymouth, 0·31 in Burnley, and 0·40 in Bradford, to 0·84 in Portsmouth and in Swansea, 0·89 in Birkenhead, 0·93 in Derby, and 1·10 in Newcastle on Tyne.

**CERTIFICATION OF CAUSES OF DEATH.**—Of the 133,090 deaths registered in England and Wales last quarter, the causes of 122,477, or 92·1 per cent., were certified by registered medical practitioners, and the causes of 8,314, or 6·2 per cent., by coroners after inquest; whilst the causes of the remaining 2,299, or 1·7 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding third quarters having been 2·2 per cent. The proportion of uncertified deaths was less than 1 per cent. in London, in Surrey, in Middlesex, in Wiltshire, and in Monmouthshire, but it reached 3·6 in Derbyshire, 3·7 in Herefordshire, 3·9 in Bedfordshire and in North Wales, and 4·4 in Huntingdonshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·1 per cent.; but whilst no uncertified deaths were registered in Croydon, in Derby, or in Bolton, the proportion rose to 2·3 in Huddersfield, 2·4 in Blackburn, 3·3 in Liverpool, 4·5 in Gateshead, and 5·1 in Halifax.

**INQUESTS.**—Inquests were held in England and Wales concerning 8,314, or 6·2 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 5·9 per cent. In the thirty-three great towns the proportion of inquest cases was 6·7 per cent., ranging from 2·3 in Huddersfield, 2·8 in Gateshead, 2·9 in Preston, 3·4 in Sheffield, and 3·5 in Burnley, to 8·5 in Croydon, 8·6 in Newcastle on Tyne, 8·7 in Cardiff, 9·2 in Birkenhead, and 13·4 in Derby.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales include 18,194, or 13·7 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 11·9 per cent. In the thirty-three great towns the deaths in public institutions averaged 20·4 per cent. of the total deaths, the percentages in the several towns ranging from 6·3 in Gateshead, 8·4 in Norwich, 8·6 in Swansea, 8·9 in Blackburn, and 9·1 in Preston, to 18·8 in Birmingham and in Salford, 19·1 in Manchester, 20·7 in Brighton, 21·5 in Liverpool, and 28·9 in London.

---

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 17·8 annually per 1000 from all causes, and to 3·74 per 1000 from the principal zymotic diseases (Table VI.). If, however, all the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 17·3 and 3·70

per 1000 respectively. Table XII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 17·0 in Edinburgh, 18·9 in Glasgow, and 22·7 in Dublin, against 17·8 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-nine of the Colonial and Foreign cities, with an aggregate population estimated at about twenty-two and a half millions, corresponded to an annual rate of 24·9 per 1000 persons living, against a rate of 18·6 in the thirty-three great English towns.

In twenty-four European and American cities the mean rate was 20·9 per 1000, against 18·6 in the thirty-three great English towns. In Paris the rate was 19·9, in Berlin 21·5, in Vienna 18·6, and in New York 19·9, against 17·8 in London. Among the other cities the death-rates ranged from 13·2 in Christiania, 14·2 in Amsterdam, 14·9 in Stockholm, and 15·8 in the Hague, to 27·0 in St. Petersburg, 27·4 in Munich, 28·0 in Trieste, 30·6 in Breslau, and 37·2 in Moscow. Among the Indian and African cities the highest rates were 41·3 in Cairo, 55·1 in Madras, and 83·6 in Bombay.

*Small-pox* caused 106 deaths in St. Petersburg, 96 in Calcutta, 45 in Paris, 30 in Bombay, 12 in Madras (12 weeks), 12 in Moscow, 10 during 12 weeks in Alexandria, and 9 during the same period in Cairo. In proportion to population, *measles* was most fatal in Paris, St. Petersburg, Moscow, and Cairo; *scarlet fever* in St. Petersburg, Moscow, Berlin, Buda-Pesth, and Trieste; *diphtheria* in St. Petersburg, Moscow, Trieste, Venice, Cairo, Alexandria, New York, and Philadelphia; *whooping-cough* in Stockholm, Christiania, Berlin, Hamburg, and Breslau; "*fever*" in the Indian and African cities, and in Paris, St. Petersburg, Rome, and Venice; and *diarrhœal diseases* in Bombay, Madras, St. Petersburg, Moscow, Breslau, Munich, Trieste, Cairo, and Alexandria.

The rates for Registration London do not in all cases agree with those in Table vi, page xv; for explanation see page viii.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

<sup>a</sup> See page 2, note <sup>b</sup>.

<sup>b</sup> For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

## METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING  
SEPTEMBER 30TH, 1900.

By JAMES GLAISHER, Esq., F.R.S., &amp;c.

The weather in July was fine, bright and warm, with a remarkably hot period extending from the 10th to the 27th. The mean high day temperature of the air was  $4^{\circ}\cdot 4$ , and the mean low night temperature  $3^{\circ}\cdot 5$  above their averages. The mean daily temperature of the air was generally below its average from the 1st to the 8th, and above from the 9th to the 31st, being as much as  $12^{\circ}\cdot 9$ ,  $10^{\circ}\cdot 2$ ,  $13^{\circ}\cdot 6$ ,  $12^{\circ}\cdot 8$  and  $15^{\circ}\cdot 5$  in excess on the 16th, 19th, 20th, 24th and 25th respectively. The following table shows the maximum temperatures from July 10th to the 27th at our Weekly and Quarterly Stations:—

**UNITED KINGDOM.**

The POPULATION of the UNITED KINGDOM in the middle of 1900 is estimated at 40,921,371 persons; that of England and Wales at 32,091,907, that of Scotland at 4,313,993, and that of Ireland at 4,515,471.

In the United Kingdom 272,929 *births* and 168,953 *deaths* were registered in the three months ended 31st December 1900. The natural increase of population was, therefore, 103,976. The number of persons married in the quarter ended 30th September 1900 was 165,418.

The birth-rate in the United Kingdom in the *fourth* quarter of 1900 was 26·5, and the death-rate 16·4, per 1000. The marriage-rate in the *third* quarter of 1900 was 16·0 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

*Emigration.*

According to the returns issued by the Board of Trade, it appears that 61,449 emigrants embarked during last quarter, from the several ports of the United Kingdom at which emigration officers are stationed, for places outside Europe. Distributing proportionally 1862 emigrants whose nationality was not ascertained, the emigrants that were natives of the United Kingdom numbered 38,986, of whom 28,164 were English, 4,219 Scotch, and 6,603 Irish, whilst 22,463 others were of foreign nationality. The proportions of emigrants accredited to the several parts of the United Kingdom, per million of the respective estimated populations, were as follows:—England, 878; Scotland, 978; and Ireland, 1462. Compared with the averages in the three preceding fourth quarters, the proportion of English emigrants showed an increase of 26·1 per cent., that of Scotch emigrants an increase of 16·4 per cent., and that of Irish emigrants an increase of 14·5 per cent.

### *Meteorology.*

Remarks by Mr. James Glaisher, F.R.S., on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, will be found, with accompanying Tables, on pages 74–81.

The weather during the quarter was generally mild and dull, with frequent rain from the latter part of October to the end of December. The mean temperature was above its average on about three-fourths of the days in the quarter, the excess ranging from 9°·4 to 13°·1 on eight days in the month of December.

The mean reading of the barometer at Greenwich was 29·712 inches, being ·041 of an inch below the average reading in the fourth quarters of 59 years; the mean reading was ·089 of an inch above the average in October, ·184 of an inch below the average in November and ·029 of an inch below the average in December. The mean temperature of the air was 47°·6, which is 3°·9 above the average in the fourth quarters of 129 years. The mean temperature was above the average in each month of the quarter, the excess being 1°·6 in October, 3°·7 in November, and 6°·4 in December. At 25 other stations of observation, the mean temperature of the air during the quarter ranged from 43°·6 at Wolverhampton, 44°·4 and 44°·6 at two stations in Halifax, 44°·8 at Llangammarch Wells, and 44°·9 at Hull, to 49°·2 at Llandudno, 49°·3 at Truro and at Eastbourne, 50°·0 at Ventnor, and 51°·6 in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory was 5·85 inches, which is 1·25 inches below the average in the fourth quarters of 85 years. The amount was 1·23 inches below the average in October and 0·32 of an inch below the average in November, but was 0·30 of an inch above the average in December. At 25 other stations of observation, the rainfall during the quarter ranged from 5·35 inches at Cambridge, 6·31 inches at Camden Square, 6·69 inches at Croydon, and 7·48 inches at Oxford, to 16·57 inches at Truro, 16·63 inches at Barnstaple, 17·67 inches at Stonyhurst, and 20·28 inches at Llangammarch Wells.

The duration of bright sunshine recorded at the Royal Observatory was 189·3 hours, being 22·6 per cent. of the time during which the sun was above the horizon; the mean proportion in the twenty-three preceding fourth quarters having been 17·3 per cent. The duration of bright sunshine was 30·8 hours above the average in October, 3·1 hours below the average in November, and 16·6 hours above the average in December.

### *Deaths.*

The deaths registered in England and Wales last quarter numbered 131,469, and were in the proportion of 16·3 annually per 1000 persons living, the average rate in the ten preceding fourth quarters having been 18·1. In

registration counties the death-rates ranged from 11·2 in Rutlandshire, 12·2 in Middlesex, 12·3 in Wiltshire, and 12·5 in Surrey, to 18·0 in Warwickshire, 18·9 in Lancashire, 19·3 in Northumberland, 19·6 in Staffordshire, and 19·7 in Durham.

The 131,469 registered deaths included 67,679 of males and 63,790 of females, the death-rate among males being 17·3, and that among females 15·3, per 1000 of the estimated populations of the respective sexes. Compared with the averages in the ten preceding fourth quarters the death-rate of males showed a decrease of 1·7, and that of females a decrease of 1·9, per 1000 living. Out of equal numbers living, the deaths of males were to those of females as 113 is to 100, against a proportion of 111 to 100 in the fourth quarters of the ten preceding years.

**URBAN AND RURAL MORTALITY.**—In those parts of England and Wales that are mainly urban\* in character, with a population estimated at a little more than twenty-two millions in the middle of 1900, the death-rate last quarter was 17·0 per 1000 living; whilst in the remaining and chiefly rural areas, with a population of about ten millions, the rate was 14·6 per 1000. The urban and rural rates were 2·1 and 1·7 below the respective averages in the ten preceding fourth quarters. Out of equal numbers living the deaths last quarter in the urban areas were to those in the rural areas as 117 is to 100, which is also the mean proportion in the ten preceding fourth quarters.

In the thirty-three great towns, of which the aggregate population in the middle of 1900 is estimated at a little more than eleven and a half millions, the death-rate was 17·3 per 1000 living, or 1·0 in excess of the death-rate in the whole country. The rates in the several towns ranged from 12·1 in Cardiff, 12·3 in Croydon, 13·0 in Norwich, and 13·7 in West Ham, to 19·8 in Sheffield and in Sunderland, 20·1 in Gateshead, 21·7 in Liverpool, 22·0 in Manchester, and 23·1 in Salford.

In the sixty-seven other large towns, with an aggregate population estimated at more than four millions in the middle of 1900, the death-rate was 16·3 per 1000 living, or 1·0 per 1000 below the rate in the great towns; whilst in the remainder of England and Wales, excluding these 100 towns, it was 15·5.

**MORTALITY AT DIFFERENT AGES.**—Of the 131,469 deaths registered last quarter, 32,991 were those of infants under one year of age, 61,904 those of persons aged between one year and sixty years, and 36,574 those of persons aged sixty years and upwards.

The mortality of infants, measured by the proportion of deaths under one year of age to registered births, was 151 per 1000, the average in the ten preceding fourth quarters having been 152. In registration counties the lowest proportions per 1000 births were 59 in Rutlandshire, 78 in Oxfordshire, 91 in Wiltshire and in Dorsetshire, 92 in Herefordshire, 95 in Somersetshire, and 96 in Suffolk and in Westmorland; the highest proportions were 174 in Lancashire, 181 in Northumberland, 187 in Staffordshire, 188 in Nottinghamshire, and 202 in Durham.

In the thirty-three great towns as a whole, infant mortality was equal to 165 per 1000 births, being higher than the proportion in England and Wales by 14 per 1000. Among the several towns the lowest proportions were 106 in Plymouth, 129 in Halifax, 133 in Cardiff, and 136 in Croydon

\* For definition of the terms "urban" and "rural," see Table III. on p. XIII. These divisions, which are periodically subject to interchange, do not necessarily correspond with the areas respectively styled "Urban Districts" and "Rural Districts" in the Local Government Act, 1894.

and in Norwich; the highest were 193 in Manchester and in Sunderland, 205 in Nottingham, 222 in Blackburn, 235 in Burnley, and 236 in Gateshead. Among the sixty-seven other large towns infant mortality averaged 161 per 1000 births, ranging from 64 in Oxford, 88 in Hornsey, 93 in Wallasey, and 102 in Exeter, to 203 in Stockton on Tees and in Newport (Mon.), 208 in Dudley, 211 in Walsall, 218 in Darlington, 227 in Darwen, and 317 in Longton. Excluding these 100 towns, infant mortality in the remainder of England and Wales was in the proportion of 137 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·5 per 1000 of the estimated population at this group of ages, being 1·0 below the mean rate in the ten preceding fourth quarters. In the thirty-three great towns the mean rate of mortality at this age-group was 9·6 per 1000 living, and ranged from 5·5 in Norwich, 6·1 in Croydon, 6·5 in Cardiff, and 7·2 in West Ham, to 11·0 in Sunderland, 11·4 in Sheffield, 12·7 in Liverpool, 13·6 in Manchester, and 14·0 in Salford. In the sixty-seven other large towns the rate averaged 8·6 per 1000, and in the remainder of England and Wales, exclusive of these 100 towns, it was 7·7 per 1000.

Among persons aged sixty years and upwards the mortality in England and Wales was at the annual rate of 61·1 per 1000 of the estimated population at this group of ages, the mean rate in the ten preceding fourth quarters having been 70·3. In the thirty-three great towns the rate was 65·6 per 1000, and ranged from 48·4 in Norwich, 49·7 in Brighton, 50·6 in Croydon, and 51·1 in Leicester, to 75·9 in Birkenhead, 77·8 in Derby, 78·5 in Manchester, 80·5 in Liverpool, and 90·8 in Salford. In the sixty-seven other large towns the rate at this age-group averaged 65·5 per 1000, and in the remainder of the country, exclusive of these 100 towns, it was 58·2 per 1000.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age was nearly stationary, that of persons between one year and sixty years of age showed a decrease of 10·5 per cent., and that of persons aged sixty years and upwards a decrease of 13·1 per cent.

**ZYMOTIC DISEASES.**—The 131,469 deaths from all causes, registered last quarter, include—

3,856	that were attributed to	diarrhœa
2,677	"	diphtheria,
2,104	"	measles,
2,090	"	whooping-cough,
1,964	"	"fever,"
1,084	"	scarlet fever,
and 8	"	small-pox.

Thus, to the above-mentioned zymotic diseases in the aggregate, 13,783 deaths were referred, being in the proportion of 1·70 annually per 1000 of the population, which is 0·21 below the mean proportion in the fourth quarters of the ten preceding years. In proportion to population, the deaths from small-pox, measles, scarlet fever, whooping-cough, and "fever," were below, whilst the deaths from diphtheria and from diarrhœa were above, the averages respectively in the corresponding quarters of the previous ten years. In the thirty-three great towns the aggregate mortality from the above-named zymotic diseases was equal to an annual rate of 1·87 per 1000 of the population, and in the sixty-seven other large towns, to almost the same rate, namely, 1·86 per 1000. In the remainder of England and Wales, excluding the 100 chief towns, the rate was 1·56 per 1000.

The deaths attributed to *diarrhœa* last quarter were 3856 in number, and corresponded to an annual rate of 0·48 per 1000 living. This rate was somewhat above the average for the quarter. The highest rates of death

from diarrhœa were 0·73 in the county of Lancashire, 0·77 in Durham, and 0·78 in Staffordshire. In the thirty-three great towns diarrhœa caused an average death-rate of 0·54 per 1000, the highest rates being 1·28 in Gateshead, 1·31 in Burnley, and 1·43 in Blackburn. In the sixty-seven other large towns the rate averaged 0·61 per 1000, a higher rate than that which prevailed in the great towns. Among these 67 towns diarrhœa was most fatal in Dover, Rotherham, Dudley, Walsall, West Bromwich and Longton. In the rest of England and Wales the diarrhœa death-rate was 0·40 per 1000.

*Diphtheria* accounted, during the quarter, for 2677 deaths, which were equal to an annual rate of 0·33 per 1000 living, or 0·03 per 1000 above the mean proportion in the corresponding quarters of the preceding ten years. The rate of mortality from diphtheria did not exceed 0·04 per 1000 either in Oxfordshire or in Cumberland; in the other counties the rates from this disease ranged upwards to 0·61 per 1000 in Essex, 0·69 in South Wales, and 1·01 in Leicestershire. In the thirty-three great towns the diphtheria death-rate averaged 0·39 per 1000; no deaths from this disease were registered either in Wolverhampton or in Huddersfield; in the other great towns the proportions varied from 0·03 in Norwich, and 0·07 in Gateshead, to 1·28 in Sheffield, and 1·79 in Leicester. In the sixty-seven other large towns the mortality from diphtheria averaged 0·35 per 1000, and showed the greatest excess in Rhondda, Burton upon Trent, Devonport, Great Yarmouth, Darwen, and Keighley. In the remainder of England and Wales the rate was 0·29 per 1000. Among registration districts and sub-districts outside the 100 chief towns, diphtheria was especially fatal in Worthing, Chelmsford, Harborton, Stafford, Wolstanton, Tardebigg, Ecclesfield, Bradfield, Gelligaer, and Llannon.

*Measles* was the registered cause of death in 2104 instances last quarter, and accounted for a mortality equal to 0·26 per 1000 living, which is below the decennial average rate for the quarter by 0·18 per 1000. No deaths from measles were registered either in Oxfordshire or in Huntingdonshire, and the rate was so low as 0·02 in Kent, and 0·03 both in Norfolk and in Cornwall; the highest county rates were 0·63 in Staffordshire, 0·76 in Cumberland, and 0·92 in Worcestershire. In the thirty-three great towns measles was fatal on the average to 0·22 per 1000 of the population. No deaths from this disease were registered either in Cardiff, Norwich, Leicester, Derby, or Halifax. In Brighton and in Leeds the rate of mortality was equal to 0·55 per 1000, and in Swansea it was so high as 1·90 per 1000. In the sixty-seven other large towns, the rate averaged 0·27 per 1000, and among these was especially fatal in Darwen, Carlisle, South Shields, Exeter, Worcester, Coventry, Accrington, and Longton. In the remainder of England and Wales the rate was 0·29 per 1000. In registration districts and sub-districts outside the 100 chief towns measles showed exceptional fatality in Kingston (Surrey), Stanstead, Wolstanton, Halesowen, Pleasley, Hucknall Torkard, Oswaldtwistle, Winlaton, and Neath.

The deaths from *whooping-cough* numbered 2090 last quarter, and were in the proportion of 0·26 per 1000 of the population, which is somewhat below the average rate (0·28) in the fourth quarters of the previous ten years. No deaths from this disease were registered last quarter in Rutlandshire, and the rate did not exceed 0·04 per 1000 in Oxfordshire; in the other counties the proportions ranged upwards to 0·47 in Durham, 0·57 in Monmouthshire, and 0·80 in Nottinghamshire. In the thirty-three great towns the mortality averaged 0·28 per 1000, the rates varying from the lowest, 0·07 per 1000 in Leeds and in Newcastle on Tyne, to the highest, 0·85 in Derby, 0·88 in Preston, and 0·91 in Nottingham. In the 67 other large towns, whooping-cough mortality averaged 0·25 per 1000, and among them showed excessive fatality in Darlington, Burton upon Trent, Barnsley, Carlisle, Warrington, Wigan, and Merthyr Tydfil. In the remainder of England and Wales, the rate was 0·25 per 1000, and was identical with the rate in the sixty-seven smaller towns.

In registration districts and sub-districts outside the 100 chief towns, whooping-cough was especially fatal in Peterborough, Warsop, Lowton, Fleetwood, Stanhope, Wolsingham, Aberysthuth, and Llanddeusant.

The registered deaths from "fever" (including typhus, enteric, and simple continued fevers), were 1964 in number last quarter, and were in the proportion of 0·24 per 1000 of the population, a rate which is slightly lower than the decennial average for the quarter (0·26). No deaths from "fever" were registered either in Huntingdonshire or in Herefordshire, and the rate did not exceed 0·01 in Berkshire; in the other counties, however, the mortality rose to 0·41 in the East Riding of York, 0·42 in Warwickshire, and 0·51 in Nottinghamshire. In the thirty-three great towns the rate was 0·29 per 1000, the lowest rates being 0·05 in Newcastle on Tyne, and 0·10 in Bristol, the highest being 0·64 in Preston, 0·66 in Portsmouth, 0·69 in Nottingham, and 0·76 in Wolverhampton. In the sixty-seven other large towns "fever" was fatal in the proportion of 0·24 per 1000 of the population, and showed the greatest mortality in Longton, Wigan, Dudley, Bootle, West Bromwich, Macclesfield, Barrow in Furness, and York. In the remainder of England and Wales, the "fever" rate was 0·21 per 1000. Among registration districts and sub-districts outside the 100 chief towns, "fever" mortality was excessive in Milton (Kent), Prittlewell, Axbridge, Sutton in Ashfield, Hindley, Bedlington, Gelligaer, and Ogmores.

Scarlet fever was fatal in 1084 instances last quarter, giving an annual death-rate of 0·13 per 1000 of the population, the average rate in the ten previous corresponding quarters having been 0·20. No deaths were referred to scarlet fever either in Oxfordshire, Huntingdonshire, Bedfordshire, Rutlandshire, or Westmorland, and the rate did not exceed 0·01 per 1000 in Northamptonshire. In Lancashire, however, the rate amounted to 0·26 per 1000, and in Durham to 0·27. In the thirty-three great towns, scarlet fever was fatal at the rate of 0·15 per 1000 of the population. No deaths from scarlet fever occurred either in Plymouth or in Norwich, and the rate of mortality from that disease was only 0·03 per 1000 in Brighton and in Birkenhead. The proportions rose, however, in the other great towns, to 0·58 in Burnley, 0·59 in Blackburn, and 0·64 in Salford. In the sixty-seven other large towns scarlet fever mortality averaged 0·14 per 1000, and among them showed the greatest fatality in St. Helens, Bootle, Wigan, Darwen, Wakefield, Keighley and Rotherham. In the remainder of England and Wales the rate was 0·12. In registration districts and sub-districts outside the 100 chief towns, scarlet fever was especially fatal in Darlaston, Hyde, Over, Ashton in Makerfield, Leyland, Rivington, and Bingley.

Small-pox was the registered cause of 8 deaths last quarter, against 33, 30, and 13 in the previous three quarters. Of the 8 fatal cases, 5 occurred in Wales.

**VIOLENT DEATHS.**—The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4902 last quarter, and corresponded to an annual rate of 0·61 per 1000 of the population, which is equal to the average rate in the ten preceding fourth quarters. The rates in the several counties last quarter ranged from 0·19 in Rutlandshire, 0·33 in Hertfordshire, 0·36 in Bedfordshire, and 0·37 in Buckinghamshire, to 0·76 in Suffolk and in Warwickshire, 0·83 in Northumberland, 0·85 in Monmouthshire, and 0·88 in Durham. In the thirty-three great towns the mean rate was 0·69 per 1000 living, the rates in the several towns ranging from 0·24 in Preston, 0·31 in Oldham, 0·36 in Brighton, and 0·37 in Bradford, to 0·84 in Newcastle on Tyne, 0·87 in Hull, 0·95 in Sunderland, 0·96 in Manchester, and 0·98 in Liverpool.

**CERTIFICATION OF CAUSES OF DEATH.**—Of the 131,469 deaths registered in England and Wales last quarter, the causes of 120,039, or 91·3 per cent., were certified by registered medical practitioners, and the causes of 8,819, or 6·7 per cent., by coroners after inquest; whilst the causes of the remaining 2,611, or 2·0 per cent., were not certified; the average proportion of uncertified deaths in the ten preceding fourth quarters having been 2·4 per cent. The proportion of uncertified deaths was less than 1 per cent. in London, in Sussex, in Middlesex, in Wiltshire, and in Monmouthshire, but it reached 3·6 per cent. in Derbyshire, 3·7 in Shropshire and in Cumberland, 3·8 in Dorsetshire, 4·0 in Herefordshire, 4·3 in Bedfordshire and in North Wales, and 5·4 in Huntingdonshire. In the thirty-three great towns the mean proportion of uncertified deaths was 1·3 per cent.; but whilst no uncertified deaths were registered in Croydon, or in Derby, and only 1 in Brighton and 1 in Oldham, the proportion per cent. rose to 3·5 in Preston, 3·7 in Sheffield, 4·2 in Halifax, 4·4 in Liverpool, and 5·5 in Gateshead.

**INQUESTS.**—Inquests were held in England and Wales concerning 8,819, or 6·7 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·2 per cent. In the thirty-three great towns the proportion of inquest cases was 8·3 per cent., ranging from 2·0 in Preston, 3·6 in Gateshead, 3·9 in Sheffield, and 4·6 in Blackburn, to 9·7 in Cardiff, 9·9 in London, 10·1 in Derby, 10·2 in Croydon, and 10·4 in Manchester.

**DEATHS IN PUBLIC INSTITUTIONS.**—The total deaths registered in England and Wales included 19,445, or 14·8 per cent., which occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 12·7 per cent. In the thirty-three great towns the deaths in public institutions averaged 22·8 per cent. of the total deaths, the percentages in the several towns ranging from 7·2 in Preston, 7·7 in Gateshead, 9·3 in Blackburn, 10·1 in Huddersfield, and 11·2 in Burnley, to 21·7 in Leicester, 23·5 in Manchester, 24·8 in Brighton, 24·6 in Liverpool, and 31·6 in London.

**LONDON.**—The figures in Tables V. and VI. include the deaths of Londoners in the Metropolitan workhouses, hospitals, and lunatic asylums situated outside registration London, but exclude the deaths of persons not belonging to London which occurred in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth and Streatham, and in the Metropolitan Asylums Board Hospitals within registration London. The death-rate thus computed was equal to 16·5 annually per 1000 from all causes, and to 1·52 per 1000 from the principal zymotic diseases (Table VI.). If, however, all

the deaths of non-Londoners which occurred in hospitals or other public institutions in London be excluded, the rates will not exceed 16·0 and 1·50 per 1000 respectively. Table VIII. shows the death-rate of London after this correction has been applied; and, since the registered mortality in many London districts is seriously affected by the deaths in hospitals and other public institutions, the death-rates in the forty-three sanitary areas, corrected by the distribution of all deaths in public institutions to the sanitary areas to which the deceased persons had belonged, are also shown. For purposes of local government, these sanitary areas ceased to exist on 9th November last, being superseded by the Metropolitan Boroughs which were created by the London Government Act, 1899 (62 & 63 Vict., Ch. 14). But, as it is necessary to show uniform statistics for every year, no account is taken of this change in those publications of the Registrar-General which deal with the year 1900.

EDINBURGH, GLASGOW, AND DUBLIN.—The annual death-rate per 1000 living last quarter was 17·7 in Edinburgh, 20·6 in Glasgow, and 24·5 in Dublin, against 16·5 in London.

COLONIAL AND FOREIGN CITIES.—From a summary of the Weekly Returns with which the Registrar-General has been favoured by various local authorities abroad, it appears that the deaths last quarter in twenty-eight of the Colonial and Foreign cities, with an aggregate population estimated at nearly twenty-two millions, corresponded to an annual rate of 20·5 per 1000 persons living, against a rate of 17·3 in the thirty-three great English towns.

In twenty-four European and American cities the mean rate was 18·2 per 1000, against 17·3 in the thirty-three great English towns. In Paris the rate was 17·9, in Berlin 17·0, in Vienna 18·5, and in New York 17·3, against 16·5 in London. Among the other cities the death-rates ranged from 12·3 in Christiania, 14·6 in Stockholm, 14·7 in Brussels, 14·8 in The Hague, 15·0 in Hamburg, and 15·2 in Copenhagen to 22·0 in Breslau, 22·8 in Munich, 24·4 in St. Petersburg, 24·6 in Trieste, and 26·3 in Moscow. Among the Indian and African cities the highest rates were 52·4 in Bombay, and 51·0 in Madras.

*Small-pox* caused 143 deaths in Paris, 12 in St. Petersburg, 10 in Bombay, 9 in Madras, 8 in Moscow, and 7 in Alexandria. In proportion to population, *measles* was most fatal in Amsterdam, St. Petersburg, Moscow, Berlin, Vienna, and Buda-Pesth; *scarlet fever* in St. Petersburg, Moscow, Berlin, and Buda-Pesth; *diphtheria* in Stockholm, St. Petersburg, Moscow, Trieste, Cairo, New York, and Philadelphia; *whooping-cough* in Breslau; "*fever*" in the Indian and African cities, and in Brussels, St. Petersburg, Rome, and New York; and *diarrhæal diseases* in Bombay, Madras, St. Petersburg, Moscow, Breslau, Munich, Trieste, Rome, Cairo, and Alexandria.

### The Year 1900.

According to the quarterly returns furnished by local registrars, 926,304 births and 587,459 deaths were registered in England and Wales during the year 1900. The natural increase of population, by excess of births over deaths, was therefore 338,845, the average annual increase in the preceding five years having been 367,989.

The returns issued by the Board of Trade show that 299,238 emigrants embarked during the year, from the various ports in the United Kingdom at which emigration officers are stationed, for places beyond Europe. Distributing proportionally 4,966 emigrants whose nationality was not ascertained, the emigrants who were natives of the United Kingdom numbered 173,358, of whom 106,102 were English, 21,016 Scotch, and 46,240 Irish, whilst 125,880 others were of foreign origin. In proportion to population the numbers of

emigrants accredited to England and Wales, Scotland, and Ireland, were 3306, 4872, and 10,240 per million respectively; the proportion for England and Wales shows an increase of 16·3 per cent., the proportion for Scotland an increase of 25·0 per cent., and the proportion for Ireland an increase of 7·3 per cent., as compared with the several figures for the previous year.

The birth-rate in England and Wales in 1900 was 28·9 per 1000 of the population, which is lower than that in any other year on record; compared with the average in the ten years 1890-99, the birth-rate in 1899 shows a decrease of 1·2 per 1000.

The death-rate in 1900 was 18·3 per 1000, which is equal to the rate in the year immediately preceding, but 0·1 below the average rate in the ten years 1890-99.

The 587,459 deaths registered in 1900 included 142,958 of infants under one year of age, 267,991 of persons aged between one year and 60 years, and 176,510 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 154, which is 1 per 1000 above the mean proportion in the ten years 1890-99. The death-rate among persons aged between one year and 60 years was 9·3 per 1000, and that among persons aged 60 years and upwards was 74·4 per 1000, of the estimated populations at the respective groups of ages.

The total deaths registered included 22,098 from diarrhoea, 12,386 from measles, 10,984 from whooping-cough, 9143 from diphtheria, 5603 from "fever," 3761 from scarlet fever, and 84 from small-pox. Thus 64,059 deaths were attributed to these zymotic diseases, corresponding to a rate of 2·00 per 1000 living, against 2·17, 2·22, and 2·21 respectively in the three preceding years.

To different forms of violence 20,598 deaths were referred, being in the proportion of 0·64 per 1000 of the population, against 0·61 and 0·64 in the preceding two years.

The 587,459 deaths included 36,724 cases, or 6·3 per cent., in which inquests were held; and 11,090 cases, or 1·9 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1900, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Sixty-Third Annual Report, which is now in course of preparation.

The Registration Districts, 635 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

<sup>a</sup> See page 2, note <sup>b</sup>.

<sup>b</sup> For London, the figures given for the quarter are derived from the Weekly Returns made by the Registrars.

## METEOROLOGY OF ENGLAND.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING  
DECEMBER 31st, 1900.*By* JAMES GLAISHER, ESQ., F.R.S., &c.

The weather in October was generally dull and mild, with frequent rain towards the end of the month. The mean high day temperature of the air was  $0^{\circ}6$ , and the mean low night temperature  $0^{\circ}8$  above their averages. The mean daily temperature of the air was generally below its average from the 1st to the 4th, from the 11th to the 16th, and from the 20th to the 22nd, and generally above on all other days, being particularly so on the 8th, 9th, and 31st, when it was as much as  $9^{\circ}7$ ,  $12^{\circ}7$ , and  $11^{\circ}6$  respectively in excess. The atmospheric pressure was below its average from the 13th to the 15th, and from the 25th to the 29th, and generally above on all other days, being as much as  $0.66$  inch in excess on the 22nd. The fall of rain was somewhat below its average at all stations.

The weather in November was mild and dull, with frequent rain. The mean high day temperature of the air was  $1^{\circ}8$ , and the mean low night temperature  $3^{\circ}6$  above their averages. The mean daily temperature of the air was above its average from the 1st to the 9th, being as much as  $10^{\circ}$  in excess on the 1st, below on the 10th and 11th, and generally above again from the 12th to the 30th. The atmospheric pressure was below its average from the 5th to the 17th, and from the 21st to the 30th, being particularly so on the 6th, 15th, 16th, 28th and 29th, when it was so much as  $0.51$  inch,  $0.57$  inch,  $0.66$  inch,  $0.68$  inch, and  $0.55$  inch respectively below; and generally above its average from the 1st to the 4th, and from the 21st to the 30th. The fall of rain was a little below its average at some stations, and a little above at others.

The weather in December was very mild, dull and wet. The mean high day temperature was  $5^{\circ}5$ , and the mean low night temperature was  $5^{\circ}3$  above their averages. The mean daily temperature was below its average from the 22nd to the 24th, and above on all other days, being particularly so on the 4th, 5th, 9th, 12th, 20th, 25th, 26th and 27th, when it was as much as  $10^{\circ}9$ ,  $10^{\circ}3$ ,  $10^{\circ}3$ ,  $13^{\circ}1$ ,  $11^{\circ}3$ ,  $10^{\circ}7$ ,  $9^{\circ}4$  and  $9^{\circ}7$  respectively in excess. The atmospheric pressure was above its average from the 7th to the 19th, and generally below from the 1st to the 6th, and from the 20th to the 31st, being particularly so on the 27th, 28th and 30th, when it was as much as  $0.63$  inch,  $0.83$  inch, and  $0.60$  inch respectively below. The fall of rain was above its average at all stations. A severe gale of wind was experienced in most parts of England on the 27th and 28th; the principal violence was felt on the west and south coasts. At Dover many thousands of tons of beach in front of the sea wall that protects the promenade was carried away; much damage was also done to the piling which protects the sea wall near the East Cliff Jetty, a considerable quantity being carried away and the wall for some distance denuded of protection down to the foundation; at Folkestone the large banks of shingle near the railway station were swept away, and the foundations carried away from under a section of the harbour contractor's railway; considerable damage was done at Sandgate to the sea defences at the western end of the town. The gale also caused great damage to shipping, and many lives were lost. Heavy rain fell in many parts of England on the 30th and 31st.

About London the mean daily temperature of the air was generally below its average from October 1st to the 4th, the mean daily deficiency being  $1^{\circ}5$ ; from October 5th to the 10th it was above, being as much as  $9^{\circ}7$  and  $12^{\circ}7$  in excess on October 8th and 9th respectively, the mean daily excess for the 6 days being  $6^{\circ}6$ ; from October 11th to the 16th it was generally below, the mean daily deficiency being  $3^{\circ}1$ ; from October 17th to the 19th it was above, the mean daily excess was  $2^{\circ}4$ ; from October 20th to the 22nd it was below, the mean daily deficiency being  $4^{\circ}5$ ; from October 23rd to November 9th it was generally above, being as much as  $11^{\circ}6$  and  $10^{\circ}$  in excess on October 31st and November 1st respectively; the mean daily excess for the 18 days ending November 9th was  $4^{\circ}2$ ; on November 10th and 11th it was below, the mean daily deficiency being  $4^{\circ}8$ ; from November 12th to December 21st it was generally above, being particularly so on December 4th, 5th, 9th, 12th, and 20th, when it was as much as  $10^{\circ}9$ ,  $10^{\circ}3$ ,  $10^{\circ}3$ ,  $13^{\circ}1$ , and  $11^{\circ}3$  respectively in excess, the mean daily excess for the 40 days ending December 21st being  $4^{\circ}7$ ; from December 22nd to the 24th it was below, the mean daily deficiency being  $2^{\circ}4$ ; and from December 25th to the 31st it was above, being as much as  $10^{\circ}7$ ,  $9^{\circ}4$ , and  $9^{\circ}7$  in excess on December 25th, 26th, and 27th respectively; the mean daily excess for the 7 days ending December 31st was  $6^{\circ}5$ .
